6. Plasters – Plastering service
7. Decorating service
8. Painter – Painting service
9. Roofers - Roofing service
10. Interior designers – Interior design
11. Building, home refurbishment
Basic Tips – When Doing Painting Yourself

When choosing a paint color for a room, the selection does not just stop at the precise color; the finish also plays an integral role in the project. What many may not realize is that there's 5-6 different paint finishes to choose from. Each finish has its own pros and cons which if not analyzed, could deter from the final outcome of the home painting project.

Here's a breakdown of each individual finish:

**Matte Finish**

Whether called flat finish or wall paint, this type of interior paint has a matte surface. This paint finish is usually used on interior walls. It's especially good if you have to camouflage small wall bumps, cracks, or other imperfections, as this finish does not reflect light. While some flat paints are advertised as washable today, you may need to touch up scratches or marks by covering with a bit more paint, so be sure you keep some on hand after you've finished painting.

**Eggshell Finish**

If you can picture the very low sheen of the shell of an egg, you have an idea of how an eggshell paint finish will appear. With only a slight hint of shine or gloss, it's good for walls and holds up better with cleaning than a flat finish paint.

**Satin Finish**

Satin finish paint has a smooth, velvety look with a bit more gloss. It is most often used for windows, doors, trim, or ceilings, but can also be used as wall paint. This is particularly suitable for kids' room walls, kitchens, or bathrooms, or in areas with a lot of traffic. Paint with a satin finish is formulated to hold up to cleaning and light scrubbing.

**Flat Enamel**

Flat enamel is paint with a durable flat, matte finish. It's a good choice for powder rooms and halls, as it holds up to occasional light cleaning.
Gloss

Gloss finishes tend to give off a shiny finish imitating the appearance of enamel or plastic. This finish is not recommended for use on interior walls. A gloss finish is often seen on furniture and has recently become somewhat of a trend as a finish on cabinets and trim. A gloss finish provides a dramatic finish but has its disadvantages. Something to keep in mind when choosing a gloss finish is the paint finish will not hide imperfections. If anything the finish will magnify surface imperfections, so thoroughly assess your project area for dings and deep imperfections. Another helpful tip is sanding before starting to paint is necessary.

Color Style Studio

Re-color photos of your house with Color Style Studio. See how your house exterior or interior will look like in virtually any color combination. Using our software it is possible to visualize anything, from your home to your car, in any color at all. No more wondering which composition is the best house paint color for you.

Interior Paint - Semi-Gloss

A semi-gloss paint finish is a wonderful choice for doors, cabinets, and trim in places like the kitchen and bathrooms. Semi-gloss can be easily cleaned and offers a delicate shine without too much gleam. Because of the slight sheen, imperfections are disguised better than say a glossy finish. To have to best outcome, it is recommended that the surface be thoroughly prepared before paint application. This process includes sanding out groves and puttying holes and indentations.

Hopefully the breakdown of each paint finish has helped you in selecting what kind of finish you want to give your interior home painting project. Never hesitate to ask your painting pro further questions and opinions about finishes in your home.
